
Imax Movie Idea

Posted by marci - 2007/04/03 17:17

Hello everyone!!! Hopefully you are all enjoying some spring weather!! Just wanted to share an idea with you. This past weekend I watched the new IMAX: DEEP SEA DVD and was THRILLED to see a whole section on coral polyps and spawning. Even MORE thrilling was the fact that I knew what it was! Anyway, I plan to show it to my kids today and it is definately worth watching!

Is this movie shown at Imax, or do I need to rent the movie?

Is this movie shown at Imax, or do I need to rent the movie?

Click here to find out whether Deep Sea 3D is now showing or is coming soon to an IMAX theater near you. If it's not showing nearby and if your local rental store doesn't have it, you can buy it online (click here to see its listing at Amazon.com). If you want to learn more about the movie before taking kids to see it or renting it, check out the trailer and general info at www.imax.com/deepsea--you'll see some great manta ray belly footage!

This is how we did our Immersion event this year. Students came to a local museum that has an IMAX and they showed the Deep Sea for us for 2 shows each day for 3 days. Then it was followed by the live internet feed (commodity interent-unfortunatly we do not have I2 here). We even got a call from Dr. Bob and piped the audio from the phone call to the whole audience. Follwing the theater, the students went back into the lobby/atrium to work with our naturalists on a live kelp activity.

"Deep Sea" was very well received - try to see it on a big screen if possible
